Charts were prepared of the mean number of days with near or distant thunderstorms per year and for the four months of the warm period (May to August) during which thunderstorm activity is most pronounced. The charts were compiled chiefly according to the number of thunderstorm days in the data of the Climatic Handbooks of the USSR (Klimaticheskie Spravochniki SSSR). In the preparation of the maps of the number of days with thunderstorms, use was made of data from about 2100 meteorological stations with
